Education

Bachelor of Engineering in Information Technology Babaria Institute of Technology	Vadodara, Gujarat 2020 – 2024
Higher Secondary Education Alpha Vidhya Sankul	Junagadh, Gujarat 2018 – 2020

Skills

Technical Skills:

Python, Artificial Intelligence, Machine Learning, Large Language Models (LLMs), Agentic AI, Retrieval-Augmented Generation (RAG), NLP, OCR, Computer Vision, Face Recognition, Data Analytics, Exploratory Data Analysis (EDA), SQL.

Libraries & Frameworks:

NumPy, Pandas, Matplotlib, Seaborn, OpenCV, LangChain, NLTK, Tesseract OCR.

Databases:

MySQL, Redis.

Tools & Platforms:

VS Code, Jupyter Notebook, Google Colab, PyCharm, Power BI, Tableau, Kaggle, Browser Automation Tools.

AI Systems & Automation:

Database Agents, Document Parsing, Chat-based RAG Systems, Web Scraping (Naukri), TTS.

Interpersonal Skills:

Teamwork, Leadership, Empathetic Listener, Self-Confident.

Experience

AI/ML Developer, Hexylon Analytics, In-Office, Ahmedabad Feb 2025 – Present

Agentic ERP System:

- Built and integrated multiple intelligent agents, including HR and Purchase Agents, into an Agentic ERP platform.
- Implemented tools to fetch complete employee details and enable automatic PO creation and approval workflows.
- Automated gate inward processes using OCR-based invoice and document parsing.
- Developed database-driven agents, chat-based RAG tools, and browser-use/Playwright-based automation.
- Scraped Naukri job applications and fine-tuned the Orpheus TTS model; integrated Veena TTS.
- Implemented face tracking and developed HR-specific automation modules.

AI/ML Intern, Bluepixel Technologies LLP, In-Office, Ahmedabad Jul 2024 – Jan 2025

LLM/NLP Customization:

- Learned to fine-tune LLMs and NLP models for specific, domain-related tasks.
- Used NLTK for text processing and customized open-source LLMs for domain-specific applications.

Pathology Report Analysis and Lab Data Extraction System:

- Built an automated system to extract lab name, report date, parameters, results, units, and biological reference intervals from pathology reports using Gemini-1.5-Flash.
- Fine-tuned the model for accurate parameter matching.
- Integrated the system with a Django backend and MySQL database.
- Added analysis capability to compare results against biological reference intervals and flag out-of-range values.

Projects

CodeBase RAG — AI-Powered Codebase Assistant

- Developed an AI-powered developer tool for natural-language conversations with any codebase (local, GitHub, or ZIP).
- Implemented a RAG pipeline using LlamaIndex, PostgreSQL with pgvector, and Google Gemini.
- Added AST-aware code chunking for accurate, context-aware retrieval.
- Enabled multi-repository support and source file citations for verifiable answers.

Real-Time Face Recognition and Attendance System

- Implemented a real-time facial recognition system for automated attendance tracking using Python and OpenCV.
- Processed live video streams and matched detected faces against a known dataset.
- Logged attendance automatically with timestamps in CSV format.

Certifications

- **Python Project for Beginners**, Great Learning.
- **Machine Learning Algorithm**, Great Learning.
- **SQL and Relational Databases 101**, IBM.
- **Data Visualization using Tableau**, Great Learning.
- **Student Start-up and Innovation Policy (SSIP-2022) Hackathon**, Participation in regional round.
- **Smart India Hackathon Software Edition (SIH-2022)**, Participation in Finale Round.
